

BRACKET SELECTION GUIDE

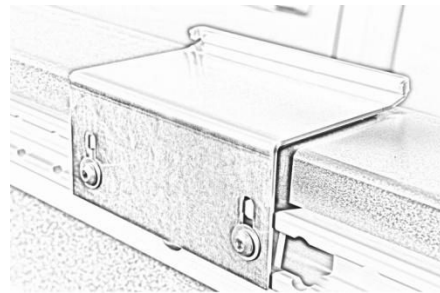

Selecting the correct bracket system is quick-n-easy!

STEP 1 – WHAT TYPE OF BRACKET DO I NEED?

Determine if your truck has **open bed rails** or **cargo management rails**.

Open Bed Rail

Cargo Management

STEP 2 – WHICH BRACKET SYSTEM FITS MY VEHICLE?

Select the type of bracket based on your trucks bed rail type that fits your vehicle.

**Our cargo management brackets are designed to fit specific trucks which are listed in the product details on our website.*

**Our open bed rail brackets are designed to fit most pick-up trucks. To ensure a proper fit, it's recommended that you take a few quick measurements. Figure 1 outlines the basic features you will need to measure.*

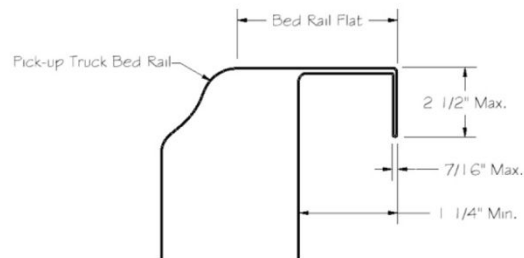

Figure 1

STEP 3 - REVIEW PRODUCT DRAWING

To confirm fitment to your vehicle, product drawings can be found in the product details section for each of our bracket systems.

** Aftermarket accessories such as drop-in bed liners may impact fitment, it is important to review prior to purchase.*

STEP 4 - BED COVER COMPATIBILITY

Most bed covers that mount to the top of the truck's bed rails can be installed directly over our bracket system.

If installing a bed cover over the bracket system, confirm that the brackets will extend out past the bed cover by referencing the product drawing and measuring your bed cover. For more details see our bed cover installation page.

STEP 5 - BRACKET SELECTION IS COMPLETE

Once you have confirmed the above, bracket selection is complete.

** For additional details, product specifications and tower compatibility please see the product detail page.*
